

IN THE SPECIFICATION:

Page 3, lines 6-7, replace the brief description of drawings with the following amended description.

Fig. 4 is a side view of the printed circuit board with the microphone associated therewith. therewith, and

Page 3, line 27 to page 4, line 2, replace the paragraph with the following amended paragraph.

The upper shell part 3 comprises a battery drawer part 31 and has sound inlet openings 32 at both sides for allowing sound to reach the further microphone 13. The sound inlet openings 32 in the ~~top~~ top shell part 3 corresponds with the sound inlets 14 when the top and bottom shell parts are assembled. Also, the top shell part 3 has a further sound inlet opening ~~33~~ 32 for guiding sound into the sound canal 42 leading to the microphone 4. As seen in fig. 2, the sound opening 32 has a snout part 33 which is open towards the inside of the hearing aid. This snout part is dimensioned to receive the mouth of the sound canal 42 when the top shell 3 is placed over the circuit board 2 in order to assemble the top and bottom parts of the hearing aid.
